THE PROBLEM

The problem *we're solving*

PROBLEM STATEMENT

PS-02 · AI Content Studio for Brands & Creators
Small businesses need to adapt the same campaign idea for different social platforms while maintaining a consistent brand voice. Doing this manually can be repetitive and time-consuming.

WHO FACES IT

Small business owners, local brands and independent creators who manage their own marketing without a dedicated content team.

WHAT IT COSTS THEM TODAY

Repeated writing and editing, inconsistent messaging across platforms, and extra effort to maintain a regular content schedule.

SOLUTION OVERVIEW

What *we're building*

IN TWO OR THREE LINES

BrandBloom transforms one business brief into a coordinated, brand-aware content campaign. It adapts the message for each platform while keeping the business details, audience and selected tone consistent.

WHAT THE USER DOES

Enters the business name, product or service, target audience, campaign goal and preferred brand tone.
Along with the theme and description

WHAT THEY GET BACK

Four editable content drafts: Instagram caption, LinkedIn post, X post and Instagram Story copy : all based on the same campaign brief.

TECHNICAL APPROACH

How *it works*

MODELS

Gemini - generates brand-aware, platform-specific content from the user's business brief.

TOOLS & FRAMEWORKS

Next.js · React · Tailwind CSS · Gemini API · Figma Make · Codex · Structured JSON · Vercel/Netlify

DATA

User provided business details and sample campaign briefs created for testing. No private customer data is required.

HUMAN APPROVAL

Users review and edit generated content before copying it for publication. The system does not automatically publish posts.

KEY FEATURES

What it will do *by 1 Oct*

01	**Brand Context Builder**	Captures business details, audience, product and tone to guide every generated output.
02	**Multi-Platform Campaigns**	Turns one brief into content drafts for Instagram, LinkedIn, X and Stories.
03	**Brand Voice Control**	Adapts the writing style to the selected tone while preserving key campaign details.
04	**Regenerate & Refine**	Regenerates individual content pieces when users want a different version.
05	**Edit & Copy**	Lets users review, edit and copy campaign content before publishing.

BASELINE & EVALUATION

How we'll *prove it works*

TODAY · WITHOUT YOUR SYSTEM

One campaign → Multiple manual rewrites

Users manually adapt the same campaign idea for different platforms.

→

TARGET · WITH YOUR SYSTEM

One brief → 4 platform ready content drafts

Target: generate the first drafts for Instagram, LinkedIn, X and Stories from one structured brief.
This is a proposed target, not a measured result. Need to validate it during testing.

HOW YOU'LL EVALUATE IT

Test 10 sample business briefs across different local business categories. Measure generation success rate and time taken. Review each output for brand consistency, platform relevance and factual accuracy, and record how much editing is needed before use.
